

Description

The **2011 Mesh** is a white open weave fabric consisting of glass fibre yarn saturated with synthetic resins. The white colour helps the applicator determine when the fabric is completely embedded into the **Ectoflex 646™** coating, particularly under poor lighting conditions. The glass fibre in this product will not rot, mildew nor “wick” water into the body of the **Ectoflex 646™** coat.

Uses

Used as a reinforcement between 2 coats of **Ectoflex 646™** providing superior strength and toughness where required or as specified by others.
